

You Can Now **Validate IDs and Certifications Instantly** Using Any QR App Reader on Your Mobile Device!

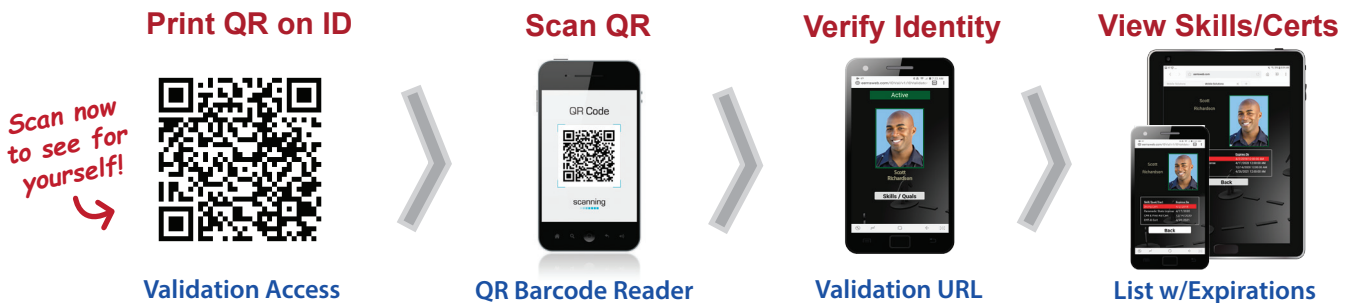

Mobile ID Allows Anyone, Anywhere to Verify a Person's Identity by Simply Scanning a Validation QR Barcode

Need to validate a member ID card? Maybe verify that First Responders on-site are certified? Check member status at events? Or ensure contractors at job sites are currently licensed?

There are many situations where a validated ID can make all the difference. **With a Validation QR, you can perform verification on-site, within seconds!**

The Validation Process

Here's How it Works

Mobile ID software creates a QR barcode tied to a personnel validation web page, housed on the Mobile ID Server. This page displays variable data including personnel status (Active, Expired, Inactive, Temporary, or Archived), name, photo, skills and certifications. This data is managed by an authorized Admin who may edit or update personnel information at any time. All edits are instantly displayed online upon save and may be viewed by anyone with a QR barcode reader app and internet access, when they scan the QR on a person's ID card.

Validate Your Members or Personnel

Issue a Validation QR on ID cards and provide users access to card holder data using any QR app reader and internet access. Anyone on-site will have the capability to verify your members' or personnel's identity, abilities, and status on-site.
